Learning Styles Thoughts

I think learning styles do somewhat affect how we learn. I don't think that a learning style wholly depicts how a person learns the best. Personally, I don't know how I learn the best when it comes to memorizing material. What I found useful was just meaningful repetition to have information ingrained into my memory. I've tried many styles of repetition such as flash cards or using pictures and sayings/acronyms and all of them work to an extent for me. I've used different learning styles for repetition, but none stand out for me. What I do know is that other people prefer to learn in different styles compared to me. I scored the lowest on tactile learning when I took the test and I agree on that front. Going out and learning by touch doesn't really do it for me. I'd rather learn through other ways, but I know a few friends of mine who love learning by doing activities and feel they learn better by hands-on projects. I read the article saying that learning styles have no scientific proof that they help kids learn better, but I think by learning in the style you find most helpful, you get more enjoyment out of learning and therefore learn better. Learning is always more impactful when having fun or feel like you understand the material, so if you think you are learning better by listening to lectures, or re-writing notes over and over again that's okay. Even though the "learning styles" aren't factually proven to be helpful, just the idea of their existence and practice of what feels most beneficial might actually help people learn faster and more efficiently.

The screenshot shows a web browser window with multiple tabs open. The active tab is 'What's Your Learning Style?'. The browser's address bar shows the URL 'educationplanner.org/students/self-assessments/learning-styles'. The website has a navigation bar with 'Students', 'Parents', and 'Counselors' links, and a search icon. The main heading is 'What's Your Learning Style? The Results'. Below this, there's a user profile section for 'Keana' with a 'Print Results' button. The 'Your Scores:' section lists: Auditory: 40%, Tactile: 20%, and Visual: 40%. A message states: 'You are an Auditory and Visual learner! Check out the information below, or view all of the learning styles.' The 'Auditory' section explains that auditory learners grasp information best through hearing and provides a list of tips: sit where you can hear, have hearing checked regularly, use flashcards, and read stories out loud. A 'This Website Uses Cookies' pop-up is visible on the right with an 'ACCEPT' button. The Windows taskbar at the bottom shows the date as 9/6/2024 and time as 2:49 PM.

Keana Print Results

Your Scores:

- Auditory: 40%
- Tactile: 20%
- Visual: 40%

You are an **Auditory and Visual** learner! Check out the information below, or [view all of the learning styles](#).

Auditory

As an auditory learner, you grasp information best through hearing. Remembering what you've heard, you find spoken instructions helpful, and you might hum or talk when bored. You absorb and understand spoken information effectively.

Here are some things that auditory learners like you can do to learn better.

- Sit where you can hear.
- Have your hearing checked on a regular basis.
- Use flashcards to learn new words; read them out loud.
- Read stories, assignments, or directions out loud.
